

Project ORION — Demo Preflight & Operator Runbook

8-Minute Live Buyer Demonstration Protocol, Verification Timeline & Script

REF: docs/acquisition/presentation/06-DEMO-PREFLIGHT-CHECKLIST.md
BASELINE COMMIT: d5908d0a0cc2feff99fa02573adb12b8eea33782
CLASSIFICATION: Confidential – Technical Due Diligence

LIVE DEMONSTRATION RUNBOOK

STRICT \$0.00 CAPITAL RISK INVARIANT

DYNAMIC CREDENTIAL GENERATION MANDATE

1. OPERATOR SAFETY INVARIANTS

- 1. Dynamic Credentials:** NEVER use hardcoded passwords. Generate fresh temporary password immediately prior to walkthrough.

2. Fresh Tenant Registration: Do not use pre-seeded accounts. Register new user (evaluator-`${Date.now()}@demo.internal`) to prove live dynamic tenant provisioning.
- 3. Paper Safety Invariant:** Capital at risk is strictly \$0.00. Point out `is_paper=True` stamping on all created orders.

4. Historical Test Wording: State: *"Documented historical test baseline of 4,260 automated tests with 99.4% coverage."*

2. PREFLIGHT VERIFICATION TIMELINE

T-24 HOURS

- Verify Git HEAD: d5908d0a
- Run tests: `pytest -m "not slow"`
- Verify migrations: alembic current (15 linear revisions)
- Confirm clean working tree

T-1 HOUR

- Start Postgres 16 & Redis 7
- Launch API: `uvicorn apps.trading-engine.src.main:app :8000`
- Launch SPA: `npm run dev (:5173)`
- Probe: `/health/live` & `/health/ready`

T-15 MINUTES

- Generate dynamic password
- Prepare dynamic registration email
- Clear browser storage & cookies
- Smoke test EUR/USD H1 backtest

T-5 MINUTES

- Set screen to 1080p (1920x1080)
- Tab 1: Terminal (:5173)
- Tab 2: Swagger (/docs)
- Tab 3: Data room dossiers (18 files)
- Check audio & window sharing

3. LIVE DEMONSTRATION PROTOCOL (00:00 — 08:00)

- 00:00 - 00:40** Marketing Landing Page & Legal Disclaimers (`/` and `/risk-disclosure`)

"Project ORION is a quantitative research and paper-trading platform. The demo operates with deterministic market data and \$0.00 capital at risk."
- 00:40 - 01:20** Self-Service Registration & Tenant Provisioning (`/register`)

"Submitting creates an isolated organization tenant, assigns the OWNER role, and initializes a default \$100,000 simulated paper trading account."
- 01:20 - 02:00** Trading Terminal & Paper Balance Overview (`/dashboard`)

"The terminal displays our simulated hundred thousand dollar paper balance. Every financial metric is explicitly badged as paper mode."
- 02:00 - 03:00** Strategy Lab & Deterministic Backtesting (`/research`)

"The engine processes historical bars sequentially using LeakageGuard to prevent look-ahead bias, producing deterministic backtest results."
- 03:00 - 04:00** Optimization Studio & Walk-Forward Analysis (`/optimization`)

"Optimization evaluates parameter sensitivity. Rolling walk-forward windows compute Walk-Forward Efficiency to detect curve-fitting."

3. LIVE DEMONSTRATION PROTOCOL (CONTINUED)

- 04:00 - 04:40

Strategy Deployment Pipeline & Quality Gates (/deployments)
"Strategies must pass automated quantitative quality gates before entering incubation, terminating strictly at paper validation."
- 04:40 - 05:40

Paper Order Execution (/orders)
"The demonstrated execution path uses simulated paper capital only, with \$0.00 live financial capital at risk."
- 05:40 - 06:20

Mark-to-Market Positions & Risk Monitoring (/positions & /risk)
"The position updates with simulated mark-to-market values. The risk engine monitors leverage caps and account drawdown thresholds."
- 06:20 - 07:00

Organization Governance & Immutable Audit Log (/organization & /audit)
"ORION enforces seven organizational roles across forty-one permissions. Every action is recorded in an immutable audit log with JSON details."
- 07:00 - 07:30

Architecture & OpenAPI Specifications (/docs)
"The platform comprises twenty-four FastAPI routers, typed Pydantic v2 schemas, and twenty-one internal domain modules."
- 07:30 - 08:00

Acquisition Handover & Data Room Review (docs/acquisition/)
"The proposed acquisition scope includes complete source code, four thousand two hundred automated tests, and eighteen closing dossiers."

4. REAL-TIME FAILURE RECOVERY PROTOCOLS

Failure Event	Immediate Operator Action	Spoken Buyer Explanation	Fallback Screen
API Disconnection	Switch seamlessly to local mirrored instance (http://127.0.0.1:8000).	"Switching to our local mirrored test harness."	Localhost Dashboard (:5173)
Registration Conflict	Append millisecond timestamp to email (evaluator-<ts>@demo.internal).	"Registering a second tenant to demonstrate organizational isolation."	Direct registration retry
Optimization Delay	Select smaller 2x2 parameter grid slice (fast EMA 8-12, slow 21-26).	"Running a targeted parameter slice for rapid demonstration."	Studio parameter form
Order Validation Error	Reduce order lot size to 1,000 units to comfortably clear simulated margin limits.	"Pre-trade risk engine enforcing available margin boundaries."	Order entry modal
